

ActiveData for Excel®: Data Analytics & Productivity Accelerator For Microsoft Excel

ActiveData is Excel is designed for people who use Excel to analyze and report on data imported from a database.

ActiveData is Excel lets non-technical users perform database style operations right inside Excel.

ActiveData is Excel is an excellent addition to any Excel user's toolbox, delivering powerful data analytics, productivity enhancements and time savings.

ActiveData for Excel contains over 100 enhancements to Excel and delivers a comprehensive set of data analytics including:

- Summarization, Pivot, Stratification, Statistics, Sampling and Aging
- Worksheet Join, Compare, Split, Combine, Query / Extract, Fuzzy Match, Gap and Duplicate Detection, Aging, Tag / Classify
- Cell Split & Combine, Calculated Fields, Data Transform, Conversion and Cleansing Tools
- Workbook Manager / Navigator, Indexing across local and networked drives, Global Find & Replace, Multi-Table ODBC Import

"I can tell you that based on my experience this software is a must have for any user of Excel. It adds functions that can assist you with everything from sampling to formatting."

- Jim Kaplan, AuditNet

"I find the program to be indispensable. There is a minimal learning curve as the program is based on basic Excel knowledge."

- Beth Brilliant, CPA, CITP

"Tight integration with Microsoft products allows for extremely easy deployment with minimal training costs" - L. Landsman, City of Baltimore

"To assist with more complex analysis and extractions, tools such as ACL and CaseWare IDEA have long been utilized, but an application called ActiveData brings many of their high-end capabilities to an Excel platform for a fraction of the cost making this an attractive competitive product that firms will actually use."

- Roman H. Kepczyk, CPA, The CPA Technology Advisor
